

std::runtime_error

```
classDiagram
    class std_runtime_error["std::runtime_error"]
    class instructionException
    instructionException --|> std_runtime_error
```

The diagram illustrates an inheritance relationship. At the top is a class box for 'std::runtime_error', which is divided into three horizontal sections: the top section contains the class name, and the two bottom sections are empty. Below it is a class box for 'instructionException', also divided into three horizontal sections: the top section contains the class name, the middle section is empty, and the bottom section contains the method signature '+ instructionException()'. A blue arrow with an open triangular head points from the top edge of the 'instructionException' box to the bottom edge of the 'std::runtime_error' box, indicating that 'instructionException' inherits from 'std::runtime_error'.

instructionException

+ instructionException()
