

std::runtime_error

```
classDiagram
    class std_runtime_error["std::runtime_error"]
    class credentialException
    credentialException --|> std_runtime_error
```

The diagram illustrates an inheritance relationship. At the top is a class box for `std::runtime_error`, which is divided into three horizontal sections: the top section contains the class name, and the two bottom sections are empty. Below it is a class box for `credentialException`, also divided into three horizontal sections. The top section contains the class name, the middle section is shaded gray, and the bottom section contains the constructor signature `+ credentialException()`. A blue arrow with a hollow triangular head points from the top of the `credentialException` box to the bottom of the `std::runtime_error` box, indicating that `credentialException` inherits from `std::runtime_error`.

credentialException

+ credentialException()
